SUMMARY

Computer Science graduate from the University of Zimbabwe with hands-on experience on both sides of IT: building and deploying web applications, and supporting the people and systems that depend on them. Enjoys taking a project from first commit to a live deployment, learning from the team around her, and leaving systems better documented than she found them. Looking to grow as a software engineer on a team that builds products people rely on.

EXPERIENCE

Glow Petroleum | IT & Software Intern · *fuel & energy*

Harare | Aug 2024 – Aug 2025

- **Owned an internal staff portal end to end** (Next.js, TypeScript, MongoDB): gathered requirements from department heads, designed the data model, built role-based access control (RBAC) so each team sees only its own data, and shipped it to staff.
- **Set up deployment for the portal**: front end on Vercel with a preview build for every pull request, and a Python (FastAPI) REST API on Render with automatic deploys from GitHub and environment-based configuration.
- Rebuilt and maintained the **company website and WordPress blog**, tidying the page structure and mobile layout and taking over updates, backups and uptime.
- **Moved the company to Microsoft 365**: migrated staff files to cloud backup, set up accounts and permissions, and walked colleagues through the new way of sharing documents.
- **Looked after the network and security**: configured firewalls, deployed an intelligent CCTV system, and set up Starlink connectivity and web-managed printers.
- Handled first and second line support, from BitLocker recovery, missing drivers and hard resets to hardware repair, and wrote up recurring fixes so the next one took minutes, not hours.

Melsoft | Software Developer Intern · *systems & software development*

Harare | Jun 2024 – Aug 2024

- **Built modules for a school management system** in PHP (Laravel, CodeIgniter) and MySQL, covering student records, fee payments and reports, from database schema through to the screens staff use every day.
- Wrote **Java and Python scripts** to clean, validate and import legacy school data, and worked in Git with code reviews before each release to the client.
- **Deployed Sage servers and workstations** for client businesses, configured SQL Server networking, and managed Sage and QuickBooks licensing and renewals.
- Supported client environments: Windows setup, endpoint antivirus, Microsoft installation and activation, network troubleshooting and regular IT health checks.

SELECTED PROJECTS

- **Intelligent Criminal Identification & Crime Analysis** (Python, OpenCV) – Final-year AI project that matches faces from CCTV footage against a watch list, sends community safety alerts and maps crime patterns over time.
- **Farmers Platform** (Ionic, Laravel, MySQL) – Web and mobile app that connects farmers with buyers and shares market prices and farming advice.
- **Full-stack web apps** (PHP, Java, MySQL) – Online Bank Marketplace, Port Management System and Online Bookstore, each with user accounts, admin dashboards and payment or booking flows.

SKILLS

Languages: Java, PHP, Python, TypeScript, JavaScript, SQL, C, HTML / CSS

Frameworks: Next.js, React, Laravel, CodeIgniter, FastAPI, Ionic, Bootstrap, WordPress, REST APIs

Data & Deployment: MySQL, SQL Server, MongoDB | Git, GitHub, Vercel, Render, CI/CD

Systems & Support: Windows, Linux (Ubuntu), Microsoft 365, networking (Cisco, Huawei eNSP), firewalls, VirtualBox, Sage, QuickBooks

EDUCATION & CERTIFICATIONS

B.Sc. Honours, Computer Science – University of Zimbabwe · *Upper Second Class (2:1)* · *AI research focus*

2026

Certifications – Huawei ICT (eHuawei), Scrum Fundamentals, Statistics (Alison)
